

Monitor Your Condition Better With a FREE In-home Monitoring Device!!

With the DayLink Monitor by your side, you can feel secure knowing that a specially trained nurse is consistently monitoring information on your health status.

Available to qualified participants in the COPD, diabetes and/or heart failure health support programs offered through HealthQuest, the in-home biometric monitoring device transmits your important health data over a secure phone line to the Alere® clinical team. This allows specialized nurses to review your information and provide guidance or even alert your personal doctor if you require immediate attention.

You may be identified for a program and qualify for a DayLink Monitor – it's free and easy to use!

How it Works

The DayLink Monitor is a communications device that connects to other devices, such as a scale or blood glucose meter. The monitor is able to record your weight, blood glucose levels and answers to questions about your condition symptoms.

Nurse calls you based on your health status

Data is sent real-time to Alere Monitoring center

Device asks you a brief series of Yes or No questions

Device takes your readings

Device is sent to your home

You will receive a call from Alere to set up device

You use the device daily – for just few minutes

Experience the Benefits

Sharing your health information via the DayLink Monitor gives you access to more frequent care and guidance, which can not only improve your health, but also save your life. This free program is completely confidential and will:

- Help you better manage your condition and improve your overall health.
- Reduce the need for you to make unnecessary trips to the ER and unscheduled doctor visits.
- Help you take charge of your health while in the comfort of your own home.
